

Embarking on a New Chapter with MultiLane Test Products

The core of the MultiLane mission has been to enable the High-Speed I/O industry with trusted, confident test and measurement solutions, while fulfilling our Corporate Social Responsibility goal of economic development in Lebanon. “It’s all about creating jobs so our children can come back and develop their careers at home,” says our founder and CEO, Fadi Daou.

Since our earliest days, MultiLane has worked to establish confidence and trust in our solutions, in our team, and our local ecosystem. Our headquarters is a testament to Lebanon’s untapped and limitless potential to serve the international high-tech industry with our country’s wealth of local engineering talent. We have built up that credibility by putting our customers first, acting with honesty and integrity in everything we do, and with an office culture where doors are always open.

Thanks to our values and our team, MultiLane Measurement Solutions has become a name synonymous with confidence across the HSIO industry. The launch of MultiLane Test Products (MLTP) through our joint venture with Teradyne is a natural next step. Both MultiLane and Teradyne operate on similar foundational principles and are committed to ensuring scalable networking ecosystem evolution. By combining MultiLane’s Measurement Solutions expertise with Teradyne’s global scale, we will be able to better serve the extreme demand and accelerated pace driven by AI use cases.

“This is a major milestone both for our ability to serve the industry and our broader corporate social responsibility mission,” says Fadi. “Our joint venture with Teradyne is a sign that we are ready and able to take the next steps in scaling up our value and creating foundations for Lebanon’s potential as a high-tech hub for the world.”
