NEW Website Is Live!

MultiLane is excited to announce the launch of our newly redesigned website. The refreshed www.multilaneinc.com features a modern look and improved functionality, delivering a comprehensive overview of MultiLane's products, solutions and more.

The new structure offers a streamlined experience. Navigating between MultiLane's products and solutions is now easier than ever and finding informative content is just a click, swipe or tap away.

ThunderBERT

We are proud to announce the new ThunderBERT platform. This improved GUI is faster and more intuitive to use, allowing users to easily handle Tx and Rx controls. It also supports a comprehensive suite of measurements like BER, SER and receiver diagnostics.

Another key enhancement is the ease to set up multiple graphs with the measurement of choice to get a quick visual representation of the DUT performance.

A version including true hardware FEC measurements will be available for purchase.

For more details, do not hesitate to contact us at sales@multilaneinc.com.
