Scale up Your DAC Cable Production with ML1105

Looking to increase your productivity in evaluation and testing of 10G-400G cables? MultiLane offers the ML1105 to have a fully automated DAC cable TDR test. It only takes a matter of seconds to perform a multitude of tests and generate a test report. Are you working on 800G DACs and need to test COM? More about it can be found [here](#).

Lightwave Innovation Reviews

Here's to another proud moment in our innovation journey. We are pleased to announce that MultiLane was selected as an Honoree in the 2021 Innovation Reviews Program. Our ML4054B was recognized among the best under lab and production test equipment category by an esteemed and experienced panel of judges from the optical communications community. More about it [here](#)

ML4035: Signal Integrity Testing Made Easy

In the technological age, exponential growth and innovation require reliable, efficient, and fast validation. MultiLane's ML4035 is a 3-in-1 BERT, E-DSO, and TDR, covering a wide range of the tech industry's most essential applications. It's the Swiss Army Knife of Signal Integrity that every engineering lab should have. Check it out here [link](#)
