

Drive Your Innovation

With MultiLane's OSFP800 Products, its Unique Signal Integrity Services and more

At DesignCon 2021

Thank you for visiting our booth at DesignCon 2021. In case you missed us, please check out the flyer [here](#) to learn more about MultiLane's latest solutions to facilitate the widespread adoption of 400G and smooth transition to 800G.

SI Design & Consultancy Services

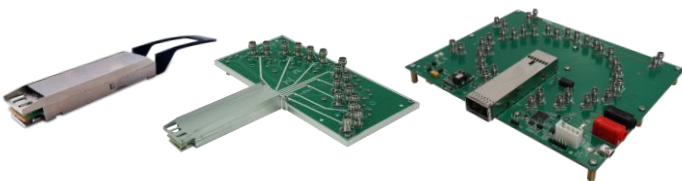

Signal Integrity Expertise

After tripling the size of its Signal Integrity team in a calendar year, MultiLane is proud to provide SI design and optimization consultation. The new Business Unit enables industry partners to achieve optimal performance out of their complex layouts. More details on the services offered can be found [here](#).

Featured Interconnect: OSFP800 Development Kit

To guarantee that our customers can navigate the new 800G frontier with ease, MultiLane provides an OSFP800 development kit that includes a module compliance board, a host compliance board, and a variety of loopback modules. Read the full specifications [here](#).

LIGHTWAVE Webinar High-Speed Data Center Connectivity Considerations

On August 31st, MultiLane, OFS, Broadcom and Lightwave will be presenting a webinar to discuss 400G connectivity, emerging laser technologies and 800G challenges. [Register now!](#)

MultiLane & Spectra7

Spectra7 and MultiLane have demonstrated at DesignCon 2021 Spectra7's new 112G PAM4 GaugeChanger chip for Active Copper Cables that will enable high-speed data centers to save power and reduce cost. [Here's](#) the link to the press release.
