SITOL, a Suite of New Stress Testing Solutions

We are very excited to share our latest solutions, which respond specifically to this new challenge, so stay tuned to learn how you can break the limit on your designs and ensure your products can operate comfortably, no matter the stress.

While speeds are reaching 800G and beyond, sensitivity to jitter and noise is increasing. MultiLane's Stressed Input Tolerance (SITOL) testing capabilities present a new key solution that guarantees your designs can meet market requirements. Stay tuned for more info on www.multilaneinc.com

SITOL

MultiLane Stressed Input Tolerance

The increased speeds of 800G and beyond also means increased sensitivity to jitter and noise. Once a peripheral aspect of the testing process, stressed input tolerance testing, or SITOL, is swiftly becoming an integral component to ensuring designs can meet market requirements.
